CHIEF ENGINEER'S REPORT.

In compliance with the law, I submit the following report:

The fire apparatus consists of an Amoskeag fire engine, the Daniel Webster No. 1, 30 ft. of suction hose and the necessary discharge pipes, nozzles, lanterns and tools; the Kenrick hose carriage, with 1000 ft. of rubber lined hose, located in the engine house on Central street, near the lower paper mill, in Franklin Falls village.

Franklin Hose Carriage No. 1, with 900 ft. rubber lined hose, located on Main street, in Franklin village.

One hand hose carriage, with 400 ft. of rubber lined hose, located at No. 1 paper mill.

A hook and ladder truck, with a good supply of ladders and the necessary supply of apparatus to go with the same, in good condition, located in the engine house, near lower paper mill.

We have on hand the old Franklin hand tub, which can be used in case of need.

ROLL OF FIRE DEPARTMENT.

Chief Engineer, Fred Aiken; Assistant Engineers, Chas. C. Kenrick, Alonzo Messer, James Grayshan, and Elias Ayles, clerk.

Daniel Webster Steamer—J. E. Ryan, engineer; J. E. Keating, assistant engineer; J. D. Kirk, fireman.

Kenrick hose carriage, with 12 men, D. Duffy, foreman; Franklin hose carriage, No. 1, with 10 men, Elmer French, foreman; hook and ladder truck, with 15 men, John F. Cunliffe, foreman.

SUMMARY OF FIRE DEPARTMENT.

Engineers, 5; steamer members, 3; Kenrick hose carriage, 12; Franklin hose carriage, No. 1, 10; hook and ladder truck, 15. Total, 45.

RECOMMENDATIONS.

There are 300 feet of hose at the Central station in reserve, and we think there should be 1,000 feet. Nine hundred feet of new hose was purchased this year and put in service.

We recommend the placing of a small reel of hose on Willow hill, and another at some convenient place on Prospect hill, which would be of the greatest service in cases of fire in either of these localities.

A new hose cart is needed at the Central station, as the reel now in use is heavy, out of date and nearly a wreck.

We also recommend the adoption of some system of fire alarm signals, by which the members of the department will know at once the location of any fire.

FRED AIKEN,

Chief Engineer.

Per ELIAS AYLES,

First Assistant.

LIST OF FIRES, 1894.

Feb. 24th.—Fire in Young's Hotel block, occupied in part by Chas. F. Noyes, dealer in boots and shoes, the rest by Young's hotel; Noyes' loss, \$1,220, insured; Young's hotel, insured \$8,000, loss, \$879. Cause of fire unknown.

April 17th.—Called on a still alarm to W. F. Daniell's, on Central street; brush on river bank; no loss.

April 29th.—Fire on land of W. F. Daniell, on Bow street; brush; no loss reported.

May 5th.—Called on a still alarm to extinguish an oil fire on Central street, front of W. F. Daniell's residence; the supply pipe from the railroad freight station burst, and the oil ignited by a match. The loss was not reported.

July 5th.—House, barn and contents of Geo. Goodline, at the lower village; loss \$2,000, insured; house and barn, \$1,000; contents of house, \$100. Cause of fire unknown.

July 23d.—House and barn of Wm. Currier were partially destroyed; insured, \$2,000; loss, \$800. Residence of Fred H. Daniell damaged by the same fire; insurance, \$2,500; loss, \$225. T. O. Calley, damage to furniture, insurance, \$500; loss, \$200.

Sept. 4th.—House owned by M. Duffy and occupied by Edward Maloney, on Pearl street; Duffy's insurance, \$1,200; loss, \$487.50; Maloney's insurance, \$350; loss, \$146.57. Cause, kerosene stove.

Nov. 29th.—Alarm of fire in Northfield, Chas. Huber's hot-house and shed. The department responded but did no work.

Dec. 2d.—Barn and ell of John L. Kelley's house on Prospect street, occupied by Dr. Webster and Mrs. Grinnell; Kelley's insurance, \$1,400; loss, \$1,300; Dr. Webster's insurance, \$700; loss, \$385; Mrs. Grinnell's insurance, \$400; loss, \$182. Supposed cause, hot ashes.

Dec. 17th.—Barn of S. F. Bohonon, on the Andover road; insurance, \$300; loss, \$300. Cause, kerosene lantern.

A. J. THURSTON,

Overseer of the Poor.

REPORT OF PARK COMMISSIONERS.

Since our last report the commissioners have completed the work of cleaning up the underbrush and trimming the trees on all the lake shore reserved as a public park. Have cleared up and improved nearly all of the unsold lots, and a portion of the grove on the east side of Webster avenue, making a beautiful grove some three hundred feet wide, extending the entire length of the avenue.

We have sold four lots and have several other very desirable lots for sale, and we submit the following financial statement :

Cash on hand as by last report,	\$439 25
Received of J. E. Barnard for lot No. 8,	100 00
" C. W. Adams, for lots No. 9 and 10,	200 00
" C. N. Emerson for lot,	110 00
" J. W. Dresser, bal. on lot No. 5,	15 00

	\$864 25

Paid—

James N. Mathews, for labor,	\$30 00

Merrimack Journal, for printing auction notice,	3 00
Franklin Transcript, for printing auction bills and notice,	4 25

	\$70 25
Balance in treasury,	\$794 00

I. N. BLODGETT, GEO. E. BUELL, E. G. LEACH, GEO. R. STONE, F. N. PARSONS, G. G. FELLOWS.	}	Park Commissioners.
---	---	---------------------

SELECTMEN'S ADDITIONAL REPORT.

1895. Paid—

Jan. 5, Will Gordon, highway agent, expense on roads three weeks,	\$111 85
5, Northern Electrical Supply Co., wiring in Town Hall,	60 00
5, Bill R. R. freight on furniture,	6 02
5, I. V. Goss, work on report, and cash paid out,	20 00
5, C. H. Sleeper, survey for road,	3 25
5, Derby, Kilmer & Pond Desk Co., furniture,	500 00
5, G. G. Fellows, outstanding 1893,	6 25
	<hr/>
	\$707 37

The above bills were paid after the accounts were sent to the printer and were paid in order that no current bills should be carried over to the city government. The work upon Memorial hall, in the effort to improve the ventilation, is not yet completed. Aside from what expense has been incurred on that account, which will not be due until the work is completed, we know of no valid claims against the town except what are stated in our report.

SEWERAGE SYSTEM.*

To the Selectmen of Franklin, N. H.

Gentlemen:—With this report I send you a plan showing a system of sewers for the town of Franklin, also profiles of all the streets, and an estimate of cost. On several of the streets which extend beyond the limits of the village, the profiles have been carried further than sewers would be built, perhaps for many years. The object of this was to determine from what distance and elevation the sewerage might eventually come, so that that portion of the system now built would be of proper size when the entire system shall be built.

These profiles will be of value to the town in grading the streets and in knowing what the pressure from the Water Works reservoir is at any point. Where the streets rise above the level of high water in the reservoir, I have so marked it on the profiles.

The plan shows a system for the entire town, or rather of that part of the town which can be drained to the points of discharge shown on the map. Nearly all the sewage can be disposed of at one point, which is a decided advantage.

The portion of the town requiring sewers at present is shown on a blue print, and that portion is included in the estimate. When additions are made, they should be in accordance with the larger plan.

The plan and estimate is based on what is known as the "Separate System" of sewerage. This consists of small vitrified sewer pipes, accurately laid to straight

*Mr. F. L. Fuller, C. E. of Boston, was employed under the vote of the town March, 1893, to make a survey and estimate for a complete system of house sewerage. His report was not received in season for action at the March meeting, 1894, and no action was then taken upon the matter.

lines between all man-holes. The latter afford opportunities for inspecting the sewer, and by looking from man-hole to man-hole, any obstructions can be detected and removed.

These sewers are for house drainage alone. All surface or street water is to be removed by other, and generally, larger pipes, which can often be carried directly to the nearest water course, or other suitable points of discharge.

To provide a system large enough to carry off quickly the water resulting from a heavy storm would incur a very great expense, perhaps several times that estimated for the present system. This is not all. Pipes much larger than those proposed will be too large to efficiently dispose of the house sewerage alone, which is their principal office. The flow of sewage for an ordinary street, would not much more than cover the bottom of a sewer large enough to properly take care of the rain falling on the street in a heavy storm. Where the flow is so shallow there is a decided tendency to clog, because there is not depth enough of water to float the solid particles. In this way deposits are made, not as many people imagine, because the sewer is too small, but because it is too large.

It is a matter of actual experience that small sewers can be kept cleaner, and carry the sewage to the point of discharge quicker, than those which are too large.

The sizes of pipes shown on the map may seem to some as too small, but it must be remembered that your streets, as a general thing, have steep inclinations, which adds very much to the carrying capacity of the pipes. If the system proposed should be adopted, it will be found that the pipes are amply large.

All changes in either line or grade are made at the man-holes. Changes in direction are made by a curved channel in the brick-work composing the bottom of the man-hole.

By having holes in the cast-iron covers of the man-holes, proper ventilation is secured. These man-holes should not be placed over 300 feet apart.

The town presents no particular difficulty to securing an efficient and economical system of sewerage. It was found impossible to bring the whole of the Main St. sewage to the otherwise common point of discharge at the corner of River and Winnipiseogee streets. The drainage of the Northerly end of this street, and also of Pemigewasset St., must empty into the Pemigewasset River.

It is proposed to cross the "Covered" bridge with an iron pipe laid on the northerly side, near the present water pipe. The crossings at the "Iron" bridge will be made by means of iron pipe, supported by the same crib-work which carries the water pipe.

The minimum grade, or the flattest slope it was found necessary to adopt, was three and one half inches in one hundred feet, on Main St., between Webster and Central Sts.

The maximum grade is nineteen feet and three inches in one hundred feet on Winnipiseogee St. There is also an inclination of fifteen feet and eleven inches in one hundred feet on School St.

The estimate provides for Y branches opposite every house and also for vacant house lots where houses may be built in the future. Through these branches the houses are connected with the sewer.

It will probably be found unwise to attempt to connect the present sewers with a new system. The new system should be in the centre of the street. At the present price of pipe it would hardly pay to dig up the old pipe. In many cases the old sewers could be used for the storm water sewer, and thus save the expense of a new surface water drain.

While much sewage in the past has been discharged directly into running streams, there is a growing feeling against the practice, as being directly contrary to sanitary science. While the estimate submitted is on the basis of discharging the sewage directly into the Winnipiseogee River, I should recommend that the sewage be purified by filtration through the soil at some suitable point at or below the corner of Water and Winni-

piseogee Sts. After such filtration, the water can safely be allowed to enter the river.

The earth is the natural purifier of all foul substances, the water is not. Whatever is to be purified, should not be put far below the surface. Sewage is generally applied to the surface of porous, sandy or gravelly land which allows the water to settle away, leaving the suspended matter upon the surface. The water becomes still further purified by its passage through the ground, and if it emerges at a point where it can be seen, will be found clear and colorless, apparently pure water, and fit to turn into any stream.

The solid portions, which constitute to the eye the filth of sewage, are left upon the surface and are oxidized and destroyed by the action of the air, the sun and vegetation.

Where the soil is not favorable in its natural condition, it can often be made so by thoroughly working it over, and underdraining it. Artificial beds are often prepared by a suitable mixture of sand and gravel. Of course such disposal requires some care and attention and the expense is more than where the sewage is turned directly into a stream, but the benefit to those below on the stream, is a matter worthy of some consideration.

While speaking of the purification of sewage a word may be in place regarding cesspools.

The great trouble with such a disposal is that it is in too large quantities for the area through which it is possible for it to filter, and is deposited too far below the surface. The ground in the vicinity soon becomes saturated with filth, and loses its power of filtration. The mass is then left to putrefy, and pollute the soil and the air for a considerable distance around, the gasses resulting therefrom often being forced into houses, causing sickness and disease. At best they are great evils and should be frequently cleaned out and purified.

After the introduction of water, sewers may naturally follow. The water forms an excellent carrier for household wastes, more water is used, and the sewers furnish the easiest method of disposing of soiled or dirty water

and the wastes it carries with it.

The present is a favorable time for the building of such public improvements, prices being low and money easily obtained.

The estimate sheet shows the streets which it is proposed to sewer, together with the length and size of pipe. An examination of the estimate in connection with the map, will give a clear understanding of the proposed scheme.

Respectfully submitted,

F. L. FULLER,

Civil Engineer.

Boston, March 5, 1894.

F. L. FULLER,

Civil Engineer.

Boston, March 5, 1894.

BOARD OF HEALTH REPORT.

To the Board of Selectmen, Franklin N. H.

The present Board of Health have served eight months from May 1, 1894. During that time there has not been an epidemic of a severe contagious or infectious disease. Four cases of Scarlet Fever and one case of Typhoid Fever have been reported. The cases of Scarlet Fever were well quarantined, an attendant outside of the family being provided as a nurse both day and night, and although there were several other children in each of the houses, where these cases occurred, not one of them came down with this most contagious disease. The value of immediate separation of these cases from other members of the family is evident enough. Taken in the nick of time there is not great danger of any general epidemic of a contagious or infectious disease.

The Franklin system of sewerage is very illy adapted to serve all the purposes for which it is used. Primarily designed to take the surface water from the streets it is now quite generally used for removal of house sewage. The size of the pipes has been determined more by the necessity of carrying off a large amount of rainfall than for strictly sewerage purposes. The pipes are in many cases altogether too large to remove sewage and are without any provision for flushing only as timely rains and melting snows perform that office. Large accumulations of sediment soon render the pipes exceedingly foul, the gases of sewage form rapidly and find their way into houses where the plumbing is poor and sufficient traps are not provided, or by way of the man-

holes into the streets. An examination of every pipe and man-hole will convince one that our system of sewerage is very crude, has been laid without plan or accuracy, and is at best only a makeshift until something better can be provided. In some sections of the city hardly any pipes have been laid and the sewage is discharged on the surface of the ground and often into the street. Since aqueduct water has come into general use there are much larger quantities of sewage to dispose of. We are of the opinion that Franklin needs a system of sewerage entirely different from that now in use, one designed for house drainage alone and admitting no surface water. Such a system constructed on estimates of the actual and prospective needs of each street and section of the city, and properly flushed, will make the city a cleaner, healthier, and more desirable place to live in. An engineer has, by survey, furnished the city a plan of a system of sewerage to meet these requirements and along these lines should the work proceed. The disposal of sewage has occupied the minds of sanitary engineers very much during the last few years and a knowledge of the requirements for a good working system has grown apace. The expense of the system should be well considered; this will be quite large and will seem to many another burden of debt. We question if there is any burden so great as the burden of sickness, and any investment so profitable as that which exorcises it from our midst. If the decision should be reached that the present system of sewerage is to be extended and made available for every section of the city, this extension will be at considerable expense and will only postpone the day of a better and safer system. The pipes as now laid will be used to remove surface water. Whatever the system used, some competent man should superintend the making of connections, should know good plumbing and should tolerate none other. Hitherto there has been an entire lack of system about the matter and house connections with the sewers have been made in utter disregard of sanitary laws. Pipes without traps, and joints without plumbing, lead pipes dangling in

wooden ones or in larger pipes of the same kind,—this has been a common condition of things. It should not be tolerated longer. Provision should be made for properly flushing the pipes. During summer drought and winter cold very little surface water is discharged into the pipes and they, especially in summer, become very foul. They should be flushed often, and there is water enough for that purpose.

The town needed a supply of good water and wisely provided it. The city needs a good working system of sewerage. Will it wisely provide that also? Before Opera House and electric lights, beautiful and useful as they are, should have come a consideration of the sanitary needs of the town, a consideration for that cleanliness, which is now, as it ever was, the next thing to Godliness.

An analysis of city water shows that it is exceptionally pure and that, with the sources of supply properly protected, there is no likelihood of contamination with anything harmful to the public health. It is our belief that there is little, if any, well water in the thickly settled parts of the city that is suitable for domestic purposes. This belief is founded on an analysis of many specimens of well water from many parts of the city no one of which has been free from danger. Water may look well and taste well and still be dangerous for drinking, and on the other hand water that is cloudy and unpleasant to the taste may be harmless. A careful analysis will alone show what the water is and where the danger, if any, lies in its use.

The following analysis of city water shows what it is without prejudice or favor.

SANITARY ANALYSIS OF CITY WATER.

E. T. Drake, M. D., Franklin, N. H.

Odorless.

Colorless.

Evaporation, Residue,

Ignition of residue,	It does not change color.
Solids, grains per gallon,	2.5
Loss on ignition, grains per gallon,	0.8
Hardness, degrees,	1.5
Alkalinity, degrees,	1.0
Chlorine, grains per gallon,	0.2
Free Ammonia, part per million,	0.04
Albuminoid Ammonia, part per million,	0.03
Nitric Acid,	Little.
Nitrous Acid,	None.
Poisonous metals,	None.
Iron,	Trace.
Sediment,	Little.
Microscopic examination.	Few infusoria and bacteria.
Diatoms, Algae.	
Oxygen for oxidation, grains per gallon,	0.019
This is excellent water.	

EDMUND R. ANGELL.

Derry N. H., May 11, 1894.

The following analysis is of the much maligned Sulphite Springs.

Odorless.

Color,	Very slight yellowish tint.
Evaporation,	Nearly quiet.
Residue, slightly yellowish and few circular patches.	
Ignition of residue,	It darkens little.
Solids, grains per gallon,	2.1
Loss on ignition, grains per gallon,	0.8
Hardness, degrees,	1.1
Alkalinity, degrees,	1.0
Chlorine, grains per gallon,	0.2
Free ammonia, part per million,	0.08
Albuminoid ammonia, part per gallon,	0.03
Nitric acid,	None.
Nitrous acid,	None.
Poisonous metals,	None.

Iron,	Trace.
Sediment,	Scarcely any.
Microscopic examination; few infusoria, little aquatic vegetation.	
Oxygen for oxidation, grains per gallon,	0.098
This is excellent water; so good aqueduct water is not often found.	

EDWARD R. ANGELL.

Derry, N. H., June 27, 1894.

Now compare these analyses with this one of well water and note the difference. The well as located, would seem as little liable to be contaminated as any well in the city. It is many rods from any habitation and the water was considered perfectly pure. No suspicions of its impurity existed and an analysis was obtained to demonstrate its equal purity with city water.

Sanitary Analysis of water.

Odorless.	
Color,	Yellowish.
Evaporation,	Nearly quiet.
Residue,	Little yellowish and few circles.
Ignition of residue,	It blackens strongly.
Solids, grains per gallon,	5.4
Loss on ignition, per gallon,	2.1
Hardness, degrees,	1.5
Alkalinity, degrees,	1.0
Chlorine, grains per gallon,	0.4
Free ammonia, part per million,	1.22
Albuminoid ammonia, part per million,	0.24
Nitric acid,	Strong trace.
Nitrous acid,	Trace.
Lead, grains per gallon,	0.035
Iron,	Trace.
Sediment,	Some.

Microscopic examination. Bacteria, infusoria, fungi.
Oxygen for oxidation, grains per gallon, 0.37

This water is badly polluted, and wholly unfit to use for drinking purposes. So much ammonia is suggestive of contamination from vaults or stable.

EDMUND R. ANGELL.

Derry, N. H., Oct. 29, 1894.

When prejudice is laid aside and water is judged by analysis, wells will have to go with many other venerable things. The Old Oaken Bucket may have brought many a pure draught of water to thirsty mortals from the wells of long ago, but from the wells of today, in Franklin, it is far more likely to bring the germs of disease, of a possible typhoid fever infection. Only one case of typhoid fever reported to the present Board of Health. This is a good showing as contrasted with the condition of things before aqueduct water was introduced. We have a supply of water, pure and good. We need better sewerage, better plumbing, and a fuller knowledge of the fact that we are in a large measure responsible for certain forms of contagious and infectious disease prevailing.

JOHN W. STAPLES, }
ERVIN T. DRAKE, } Board of Health.

January 3, 1895.

COMMENTS.

It would be interesting, at this time of transition from town to city government, to review our school history somewhat more at length than our space permits, but even a brief retrospect may serve, by way of comparison, to create a much-needed feeling of appreciation for our present educational privileges. Seldom, perhaps, in the history of any community, can the landmarks of educational progress be so plainly seen as in our own midst to-day.

In passing along the two main streets of our curiously divided town, it is possible to see seven buildings which have been erected at different times, for the accommodation of our schools. Four of these have been given over to other uses, but the memory of old time service still clings to them. They are fair exponents of the education of their times; milestones marking the onward processes of life and the resistless march of time. Edward Everett has said:—"There is certainly nothing in which the rapid progress of our country is more distinctly marked than in its schools."

In many ways pertaining to education, it is doubtless true that we are in advance of the old days; in some, it maybe, unfavorable contrasts may be made between the present and the past. All progressive movements have their incidental evils and dangerous tendencies. In these days, when not only books but every item in the list of school necessities is furnished for the pupil; when he may enjoy gratuitously the opportunity of obtaining a better education than could have been obtained in the early days of the century by the wealth of the Indies, there is serious danger that he may be unmindful of what he owes in return for these things. Especially is this

true in a mixed community like ours. The pupil seems to accept the comfortable school accommodations, the generous equipment for work, the painstaking efforts of hard-worked teachers as a matter of course, indeed he is likely to regard his mere presence in the school room as something of a favor. Regular attendance, good behavior, and the faithful performance of allotted tasks depend too often on fancy or caprice.

We have not so great need of increased opportunities for learning as of increased desire on the part of the pupils to improve those opportunities which they already have. The community has been liberal in its money appropriations for school purposes, it should also be rigidly insistent that the advantages thus secured should be wisely improved. We have faithful and competent teachers who need the co-operation of the whole body of parents, of the whole community.

A great and lasting injury is done to both school and pupil when a child's prejudices are accepted as a correct estimate of a teacher, when he is allowed at home to call his teacher opprobrious names, when school trickery and dishonesty are excused and even encouraged. The teacher's efforts for the best development and education of the child are often counteracted by these pernicious home influences.

With the increase in the membership of our schools, there will be need, especially in our higher grades, of adopting more stringent measures in regard to discipline. Our teachers should not be expected to spend their time and strength contending with persistently disobedient pupils. Such pupils should be deprived of the privileges they are abusing, by suspension or expulsion. Until the process of evolution has reached a more advanced stage than at present, there will ever be those who are in need of strong repression as well as kindly counsel. Self control must be cultivated, habits of industry established, authority maintained and respected. When kindness fails to teach these lessons, firmness must. It is not the punishment which degrades the pupil but the misdeemeanor which merits the punishment.

The accompanying statistical table shows the membership of our schools. Our High school room is inadequate as regards both space and the proper means of ventilation for the hundred pupils now in attendance. But at present the only way of mitigating the inconvenience of close quarters seems to be to make the best of them. The spirit of hearty and willing learners is not easily daunted.

Our primary rooms, show the usual rate of increase. Kindergarten work has been introduced to some extent into our first primary grade, and the success of this brief trial of the system seems to warrant its continuance and the hope that it may in time become a permanent feature of our schools.

Systematic work in drawing has been productive of good results in more ways than one, in those grades where it has been introduced.

The condition of our ungraded schools does not change in any appreciable degree from year to year.

Few changes have been made in our curriculum of study, and these are in the direction of eliminating some of the detailed study of geography and of improving the course in English. It is hoped that the new series of text-books, which has been introduced as an aid to the study of the English language, supplemented by the special efforts of our teachers, may bring about a reform in that department.

Much can be done each year to improve our course of study, not by the introduction of all the fashionable whims of the day, but by compelling a more practical presentation of fundamental subjects. We need good tools for accomplishing any worthy ends in education. Without these, all attempts at future culture are a shallow pretense. Meanwhile no fears of destroying the child's individuality need be entertained. Real genius is not easily stifled.

We are making a new departure. It is incumbent upon our city government, not only to guard and complete the schools which our fathers planted in this busy

valley, but to make every department of municipal life their strong ally.

The large number of children in the lower grades have made assistant teachers necessary. At the Simonds school, where there have in past years been but few children who could be cheaply conveyed to the Call school, we find twelve or thirteen and it has been necessary to open a school. These have added to the expense of the year. The large number entering the High school, called for new and expensive books, and also for additional seating capacity.

The West village grammar school is the largest for several years and appearances indicate a call for more room at an early date.

The estimate of the Board of last year called for \$500.00 to meet outstanding claims. When the bills were all in the amount was found to be upwards of \$1,800.00. Three of the ungraded school buildings have been shingled and painted and other needed repairs made. The trouble with the boilers in the High school building, which was a source of annoyance during the fall term, has been obviated and they are now working satisfactorily.

For several years an effort has been made to bring all studies below the High school into a nine years' course. The present course of study was arranged for ten years and instructions given the teachers to, as soon as practicable, accomplish the work in nine years. Some things, nonessential, have been dropped, and the work simplified, until the class now in grade IX, or the "Grammar School" as it is frequently called, will be qualified to enter the High school at the close of next term. This has been brought about by the arrangement of rooms in the Falls making it possible to give each teacher one class doing one year's work.

ROLL OF HONOR.

HIGH SCHOOL. Myrtie E. Holt, Charles H. Scribner, Gertrude M. Scribner, Maude E. Scribner, Lottie W. Bailey, Agnes M. Ralph, George S. Smith, Alfred G. Thompson, Josephine R. Welch.

GRADE IX. Ethel Young, Frank J. Sulloway, Ned K. Simpson.

WEST GRAMMAR. Clara Phillips, Bessie Rowell, Danna Welch, Ernest Grace, John Judkins, Willie Jackman, Harry Smith, Harry Thompson, Grace Beau, Lily Bean, Alice Thompson, Effie Davenport, Agnes Greeley, Mary Greeley.

GRADE VIII. Ida M. Colby.

GRADE VII. Henry Hinds, Grace Hinds, Claude Byrne, Arthur Blood.

GRADE VI. Cora E. Hinds.

GRADE V. Mary Maloney, Harry Clifford, Walter Young.

WEST INTERMEDIATE. Blanche Matthews.

GRADE IV. Mary Davis, Annie L. Judkins, Sadie Sissons, Diana Tousner, Edward Bunton.

GRADE III. Helen Heath, Ida M. Tousner.

GRADE II. Inez Heath, Clara Taylor, Evelyn Thompson, John Hawthorne, Nicholas Keating, Bonomed Lafond, Charlie Naud, Arthur Wise.

GRADE I. Ida LaMay, Estelle Clifford, Ethel Wise, Herbert Hancock.

WEST PRIMARY. Carrie Grace, Bertha Sleeper, Mildred Wells, Harold Heath.

WEBSTER. Mamie B. Neal, Emma A. Lyon.

POND. Isadore B. Tilton.

CALL. Minnie M. Martin.

SHAW. Maude J. Emerson, Gertrude L. Piper, Kate M. Piper.

MORRISON. Evelyn Herbert, Bell H. Whitcher, Etta M. Whitcher, Clarence H. Woodard.

MAPLEWOOD. Arthur O. Kelley, Flora M. Stevens, Lena E. Stevens, Jessie M. Shaw, Birdie M. Walker.

 } Commissioners.

Franklin N. H., Dec. 31, 1894.

AUDITORS' REPORT.

We have carefully examined the accounts of the Board of Water Commissioners for the year 1894, and find the same correctly cast and well vouched.

GEO. R. STONE, }
 GEO. E. DUFFY, } Auditors.

Franklin, N. H., January 15, 1895.

VITAL STATISTICS.

MARRIAGES.

TO THE BOARD OF SELECTMEN OF THE TOWN OF FRANKLIN: In compliance with an act of the Legislature, passed June session, 1887, requiring "clerks of towns and cities to furnish a transcript of the record of births, marriages and deaths to the municipal officers for publication in the annual report." I hereby submit the following marriages, registered in the town of Franklin, N. H., for the year ending Dec. 31, 1894:

Date of Marriage	Place of Marriage,	Name and Surname of Groom and Bride.	Residence of each at time of Marriage.	Occupation of each.	Age in years of Groom & Bride each.	Name of Parents.	Birthplace of Parents.	Occupation.	Name, Residence and official station of person by whom married.
